

Accumulator Workshop

SAMPLE TRENDS REPORT

Position	Observation	Percentage
Motorhand	Does not understand the difference between engaged and neutral four-way valve handles on the accumulator	20%
	Does not understand how the accumulator works as a backup system	42%
	Can identify accumulator pressure but does not understand how they apply to the well control system	84%
	Does not know what the usable volume is when talking about accumulator bottle size	78%
Derrickhand	Does not know correct accumulator system pressure	52%
	Does not know proper pressure for accumulator manifold	34%
	Cannot replace bladder in accumulator bottle without supervision	38%

Put the experts in your corner

Give your crew commanding knowledge of BOP control systems with the Wild Well Risk Management Services (RMS) Accumulator Workshop.

Our accumulator training program combines interactive classroom instruction with a hands-on walkthrough of basic and critical operational components for your onsite accumulator system.

RMS well control equipment experts deliver quality coaching to develop a crew's practical and operational understanding of the accumulator system in the following areas:

- Equipment components and appropriate pressures
- Accumulator checklist to ensure proper functioning
- Maintenance musts for top-notch operational performance
- Accumulator bottle inner workings for inside-out know-how
- Troubleshooting to recognize potential issues
- More than a workshop, it's onsite training with hands-on proficiency

Trending now: Your crew, your rig

The Trends Report provides customers with a comparison evaluation based on 50 random, anonymous crews, showing how your crew stacks up against others. The percentage indicates the amount of rigsites that have personnel with the same deficiencies.
