

Mechanical Design

Results-driven mechanical design

Product design and innovation can revolutionize markets and eradicate problems. However, the transition from an idea to a tangible, market-ready solution can be difficult. Computational modeling and analysis can assist with this process, accelerating the design cycle at a greatly reduced cost when compared with traditional methods.

Experience that works

With engineering design and analysis as its core expertise, the Wild Well Advanced Engineering team delivers innovative products for a wide range of services across the industry. From simple pipe spools to the relocation of land rig units, Wild Well designs it. We offer:

Product development

- 2D/3D computational modeling
- Fabrication drawings
- Access to expert analysis teams

Project experience

- Front-end engineering design
- Troubleshooting
- Engineering calculations

Full lifecycle

- Concept generation
- Detailed design and analysis
- Code checks and verification
- Fabrication management
