

Well Control Training

An industry leader providing real-world training solutions.

With 11 permanent training facilities strategically located around the world and more than 40 traveling locations, Wild Well has provided training for more than 90,000 students across the U.S. and the world. Our unique approach incorporating real-world Wild Well case histories and challenging simulations ensures student engagement.

- Curricula developed with a focus on new adult learning principles tied to numerous generic case histories and simulations that continuously challenge learners
- Drilling course in both advanced and standard formats
- Meets the accreditation requirements of IADC and API for all course levels (introductory, fundamental and supervisory) in Drilling, Workover, Subsea and Well Servicing, which includes coiled tubing, snubbing and wireline
- The Ultimate Killsheet meets the demand for an electronic killsheet that helps improve competency by offering mixed units (Imperial/metric/SI) in real time
- Staff includes more than 25 industry-certified instructors with numerous years of field experience to allow for a diversified first-person experience that brings the field to the classroom
- Intense, hands-on simulation exercises build improved communication and team organization skills when kicked off with safety meetings that work to minimize well control situations and problematic events in the field
